Globe Valves

Bellows-type Globe Valves to DIN/EN

NORI 40 ZXLBV/ZXSBV

Main applications

- Process engineering
- Chemical industry
- Petrochemical industry
- Sugar industry
- Heat recovery systems
- Boiler feed applications
- Nuclear power stations

Fluids handled

- Water
- Steam
- Thermal oil
- Other non-aggressive fluids such as gas or oil on request.

Operating data

Operating properties

Characteristic	Value
Nominal pressure	PN 25/40
Nominal size	DN 10 - 200
Max. permissible pressure [bar]	40
Min. permissible temperature [°C]	≥ -10
Max. permissible temperature [°C]	≤ +450

Selection as per pressure/temperature ratings (⇒ Page 5)

Valve body materials

Model with flanged ends, DN 10-40, and model with butt weld ends, DN 10-50

Overview of available materials

Material	Material number	Temperature limit
P 250 GH	1.0460	≤ 450 °C

Model with flanged ends, DN 50-200, and model with butt weld ends, DN 65-200

Overview of available materials

Material	Material number	Temperature limit
GP 240 GH+N	1.0619+N	≤ 450 °C

Design details

Design

- Tapered valve disc
- Two-piece stem
- Back seat
- Back-up gland packing with gland follower
- Position indicator
- Fully confined bonnet gasket
- Materials free from non-ferrous metals
- EC type-tested (Module B), component mark TÜ.A.-209
- Exterior coating: blue, RAL 5002
- TA-Luft-compliant design to VDI 2440

Variants

- Throttling plug
- Balanced plug ≥ DN 125
- Locking device
- Travel stop
- Studs and nuts made of A4-70 (low-temperature steel)
- Oil and grease free (wetted parts)
- Other flange designs
- Other butt weld end versions
- Other socket weld end versions
- Inspections to technical codes such as TRD/TRB/AD2000 – German Steam Boiler / Pressure Vessel Regulations – or to customer specification

Product benefits

- High functional reliability and long service life
 - Two-piece stem. Burnished, non-rotating lower stem makes for minimal wear and long service life of the gland packing.
 - Hard-faced valve seat made of wear and corrosion-resistant materials.
- Reliable sealing. Bonnet gasket fully confined to prevent creep.
- Additional stem seal for emergency operation and blow-out protection by standard back seat as well as back-up gland packing made of pure graphite.
- Reliable shut-off due to tapered valve disc with angled seat/disc interface. Can also be used for contaminated fluids thanks to self-cleaning properties.
- Easy to repair due to corrosion-protected bolts/screws and nuts

Product information

Product information as per Regulation No. 1907/2006 (REACH)

For information as per chemicals Regulation (EC) No. 1907/2006 (REACH), see <http://www.ksb.com/reach>.

Product information as per Directive 2014/34/EU (ATEX)

The valves do not have a potential internal source of ignition and can be used in potentially explosive atmospheres, Group II, category 2 (zones 1+21) and category 3 (zones 2+22) to ATEX 2014/34/EU.

Product information as per Pressure Equipment Directive 2014/68/EU (PED)

The valves satisfy the safety requirements of Annex I of the European Pressure Equipment Directive 2014/68/EU (PED) for fluids in Groups 1 and 2.

Mating dimensions as per standard

- Face-to-face length: EN 12982/64
- Butt weld ends: DIN EN 12627 Figure 2
- Socket weld ends: DIN EN 12760

Different designs of butt weld ends, socket weld ends and welding groove types are possible, but only within the dimensions A_{max.} and B_{min.}

Butt weld ends to DIN 3239/1 or socket weld ends to ASME B16.11 and DIN 3239/2 are possible.

5) Open
6) Vertical clearance for removal

Installation instructions

Shut-off globe valves must be installed in the line so as to ensure that the fluid enters the valve beneath the valve disc and flows out above the valve disc. They can also be installed in lines with alternating flow.

If the max. permissible differential pressures for shut-off are exceeded for valves from DN 125 to 200, a balanced plug design is required. In this case the valve must be installed in such a way that the pressure to be sealed off lies above the valve disc.

The balanced plug works on the bypass principle and can only serve its purpose if backpressure builds up after opening, so that the max. permissible differential pressures for shut-off (see table) are not exceeded.

Differential pressure [bar] for standard valve disc

DN	Δp
125	33
150	21
200	14

For globe valves with throttling plug, detailed information about the operating mode is required for optimum valve selection.

Further installation instructions

Durability of bellows

Number of load cycles at 20 °C

DN	Operating pressure [bar]			
	10	16	25	40
10-150	34000	32000	28000	20000
200	17000	16000	14000	10000
